Since Mobile phone users' growth is rapid every year, the entertainment industries have shown a good interest towards mobile games. Yet the world in infant stage in mobile gaming when compared to PC and console games. This article speaks about the developments that will overtake the mobile game development scenario in a few years.

Future Mobile Game Development

The following topics are the new emerging trends in the mobile gaming world. And these trends will conquer the entire market in a few years to come.

- Massive Multiplayer Mobile Game Development
- Advertising/Promoting Through Mobile Games
 - Promoting Cinemas/Movies Through Mobile Games
 - Advertising New Products Through Mobile Games
- 3d Real World Scenario Mobile Games

Massive Multiplayer Mobile Game Development

The 3rd generation games with AI computer players are getting outdated today and the global multiplayer is getting its value. For this reason Online Massive Multiplayer Mobile Game Development is introduced, where players play against many other people around the world with their mobile phones. Definitely in a few years massive multiplayer mobile games will hit the market like the PC game scenario.

Interactive Server

This Massive Multiplayer Mobile Game is using the GPRS connection for the networking with a central server acting as router. It is almost the same as Nokia's SNAP technology. This trend will soon get popular around the mobile game players.

3d Real World Scenario Mobile Games

Today in mobile game development there is lot of restrictions and minimal resources available for game development, like CPU and memory in the device. The mobile gaming industry has just reached 3D gaming and soon there will be real world scenario games on mobile phones.
